Fire Management in ABC County

Fire in ABC County is an ever-present and natural part of the landscape. Your views on this topic are very important to government fire managers as they decide how to protect homes and maintain the health of ABC County's forests and wildlife in the future. Your participation in this survey is important and greatly appreciated.

Currently, the government agencies responsible for managing public forests have in place a fire management program that both controls wildfires and authorizes the use of both prescribed burning and mechanical methods of reducing vegetation fuels on federal, state and private forests in ABC County. At the same time, homeowners can contribute to controlling wildfires and reducing losses by creating defensible spaces around their homes with "fire-wise" landscaping.

We would like to hear your views on these fire management tools, each of which can result in a reduction of the size and effect of future wildfires.

Before you begin the survey we want to define the following terms:

Fuel management approaches: Methods developed by foresters and fire professionals to reduce the extent and damages of wildfires on federal, state and private land. This survey addresses these three fuel management approaches.

- **Prescribed burning:** Also called controlled burning, this practice can involve, 1) allowing a naturally caused fire to burn under close and careful watch; or 2) intentionally setting fires in ways that can be controlled to produce desired conditions and protect against undesired results.
- **Mechanical fuel reduction:** These methods vary widely. Resource managers can use chainsaws, brush mowers, or other specialized machines to reduce the number of shrubs and small trees where they are so numerous that they increase the risk and size of wildfires.
- **Defensible space ordinance:** This approach requires homeowners to create and maintain a fire-safe zone around their homes by removing flammable vegetation within 30 feet of their home. It would also require that yard trees and shrubs be no closer than 15 feet apart and that the lower limbs of trees be pruned to a height of 15 feet from the ground or greater.

Wildland: The term "wildland" refers to forests, grasslands, and rangelands in ABC County.

Some fire professionals have suggested that these three approaches to fuel management can be used in combination; for example, creating a defensible space can increase the effectiveness of prescribed burning or mechanical fuel reduction on adjacent lands.
